DETAILED ACTION

1. This application has been reviewed. Original claims 1-25 are pending. The rejection cited stated below.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

3. Claims 9-13 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. The subject matter “**calling script**” as recited in claims 9-13 was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claims 1-25 are rejected under 35 U.S.C. 102(b) as being anticipated by Shakib et al U.S. Patent No. 5,812,793.

Art Unit: 2153

- identifying changes in a source file set (keeping track of locally made changes to a particular data set), (see col. 4, lines 25-38);
- storing the identified changes in a modification list (see the abstract, store and forward and col. 9, lines 55-67);
- transmitting the modification list to an agent having access to a destination file stem (see col. 14, lines 50-67 and col. 10, lines 34-44).

In considering claims 2-3 and 25, Shakib et al discloses a system, further comprising the step of transmitting the changed files to the agent having access to the destination file system and installing the changed files on the destination file system (see col. 10, lines 34-44).

In considering claims 4-7, 16-17, Shakib et al discloses a system, wherein the

identifying step comprises the steps of:

inspecting a set of files, comparing the set of files to an earlier-recorded set (see col. 13, lines 11-44);

installing a device driver to perform file operations and recording, by the device driver, changes to the source file set (inherent); and

receiving a manifest (list) describing changes to the source file set (see col. 9, lines 55-67);

In considering claim 8 and 18, Shakib et al discloses a system, wherein the file attribute comprises at least one attribute chosen from the set of file size, file permissions, file ownership, modification time, and a hash of the file (see col. 4, lines 50-65).

Art Unit: 2153

As per claim 14, the claim includes features in claim 1 discussed above, further reciting:

transmitting the modification list to a plurality of web servers (plurality of replica nodes
(see col. 14, lines 50-67).

In considering claim 15, Shakib et al discloses a system, wherein the transmitting step comprises
broadcasting inherently including multicasting (see col. 14, lines 50-67).

In considering claims 19-20. The claim have similar scope as claims 1 and 14 and are rejected
under the same rationale.

In considering claims 21-23, Shakib et al discloses a system, including:

identifying changes in a source file set (keeping track of locally made changes to a particular
data set), (see col. 4, lines 25-38);

storing the identified changes in a modification list (see the abstract, store and forward and col.
9, lines 55-67);

transmitting the modification list to an agent having access to a destination file stem (see col.
14, lines 50-67 and col. 10, lines 34-44).
